2022-2026-CSE-A

Aim:

Design a C program which determines the numbers whose factorial values are between(including) minimum and maximum values.

For example: The value of 6! is 720, 7! is 5040 and 8! is 40320. The factorial of 7 (5040) exists between the given limits.

Constraints: 1 <= min,max <= 103

Instruction: Your input and output layout must match exactly with the layout of the visible sample test cases.

Source Code:

factorial.c

```
#include<stdio.h>
void main()
   int fact=1,i,max,min,x=1;
   printf("Min: ");
   scanf("%d",&min);
   printf("Max: ");
   scanf("%d",&max);
   printf("Values: ");
   for(i=1;i<=max;i++)
   fact=fact*i;
   if(fact>=min&&fact<=max)</pre>
   if(x==1)
   printf("%d ",i);
   x=0;
}
   else
   printf("%d ",i);
}
}
printf("\n");
```

Execution Results - All test cases have succeeded!

	Test Case - 1	
User Output		
Min: 5		
Max: 10		
Values: 3		

User Ou	itput
Min: 5	
Max: 2	29
Values	: 3 4
